LinkedIn

How to recover an email:

On Target page: view page source

CTRL f: member:

> 1st ID will be yours

> 2nd will be Target

Download LIUsers data breach file to discover UIDs and emails.

> *Note the date of the breach (2016 for LinkedIn).*

Search file by UID to find email.

> **{ rg "uid#" linkedin_users.txt --color=always }**

Find user by email: Contact Exploitation

Create a *linkedin.txt* with random emails like jsmith@linkedin.com, sock puppet accounts, etc., and the Target email.

Manually add the Target email into your Contacts:

My Network>Contacts>+Add more contacts>Upload a file (linkedin.txt)>open>upload

You may have to skip to the end and the go back into contacts.

> Connect means "public". Invite means the is some privacy active or the account doesn't exist.
